"program code for music dance of large super intelligent robots" 2025 v1.5 ● To write a complete program code for music dance, involving multiple modules, including opening, halftime, closing, band accompaniment, robot dance, audience interaction, etc. The following is a simplified Python code example that shows how to implement these functions. This example assumes that you already have an intelligent robot control library, a music playing library and an audience interaction system.

1. Import the necessary libraries

```python
import time
import random

# Suppose we have these libraries to control robots, play music and handle audience interaction.
from robot_control import RobotController
from music_player import MusicPlayer
from audience_interaction import AudienceInteraction
```

2. Initialize each module

```python
# Initialize the robot controller
robot_controller = RobotController()

# Initialize the music player
music_player = MusicPlayer()

# Initialize the audience interaction system
audience_interaction = AudienceInteraction()

# Initialize the band
band_size = 30
band = [f"Musician {i+1}" for i in range(band_size)]
```

3. Opening procedures
```python
def opening_ceremony():
Print ("Announcer: Welcome to the 2025 Intelligent Robot Music Ball!" )
time.sleep(2)
Print ("Announcer: Please enjoy the opening overture!" )
time.sleep(1)

# Play the opening overture
music_player.play("opening_overture.mp3")

# Robots start dancing
robot_controller.start_dance("waltz")

# Audience interaction
audience_interaction.cheer()

Time.sleep(5) # Overture lasts 5 seconds.
Print ("Announcer: The opening overture is over and the dance officially begins!"
" )
```

4. Midfield program
```python
def intermission():
Print ("Announcer: It's halftime, please relax!" )
time.sleep(2)

# Play relaxing background music
music_player.play("intermission_music.mp3")

# Robots perform simple interactive performances.
```

```
robot_controller.perform("interaction")

# Audience interaction
audience_interaction.clap()

Time.sleep(10) # The intermission lasts for 10 seconds.
Print ("Announcer: The intermission is over, and then the climax of the dance!"
" )
```

5. Dance program
```python
def dance_session():
Print ("Announcer: Here is the dance music, a world famous song!" )
time.sleep(2)

# Conductor starts shooting.
Print ("Command: 1, 2, 3, go!" )
time.sleep(1)

# Play dance music
music_player.play("world_famous_dance.mp3")

# Robots start dancing
robot_controller.start_dance("tango")

# Audience interaction
audience_interaction.cheer()

Time.sleep(10) # Dance music lasts 10 seconds.
Print ("Announcer: Dance music is over, thank you for your enthusiastic
participation!" )
```

6. Closing procedure
```python
def closing_ceremony():
Print ("Announcer: Thank you for your participation. It's the closing ceremony!" )
time.sleep(2)

# Play the closing song
music_player.play("closing_song.mp3")

# The robot performs the final performance
robot_controller.perform("finale")

# Audience interaction
```

```
audience_interaction.cheer()

Time.sleep(5) # The closing song lasts 5 seconds.
Print ("Announcer: The 2025 Intelligent Robot Music Ball has come to a successful conclusion, thank you!" )
```

7. Main program
```python
def main():
# Opening
opening_ceremony()

# Midfield
intermission()

# Dance music
dance_session()

# Closing
closing_ceremony()

if __name__ == "__main__":
main()
```

8. Run the program
```python
# Run the main program
main()
```

9. Code Description
-**RobotController**: controls the dance and performance of intelligent robots.
-**MusicPlayer**: controls the playback of music.
-**AudienceInteraction**: Handle audience interaction, such as applause and cheers.
-**band**: A member of an analog band.

10. Extended functions
-* * More dance music * *: The function dance_session can be extended to support more dance music types.
-* * More robot dances * *: ` robot_controller' can be extended to support more dance types.
-* * Audience interaction * *: audience_interaction can be extended to support more interactive ways, such as voting and grading.

This code example is a simplified version, which may need to be adjusted and expanded according to specific needs in practical application. ●
According to the process requirements of music dance, a set of modular program code framework is designed by combining artificial intelligence and automatic control technology. The following system includes three core modules: robot dance arrangement, intelligent music generation and multi-device collaborative control. Citation [3] (https://blog.csdn.net/weixin _ 42511080/article/details/115808426) [7] (https://sghexport.shaobserver.com/html/baijiaohao/2023/07/00 (https://www.zghy.org.cn/item/682320743792300032) [12] (https://www.bilibilibili.com/video/av970410235/) [14] (https://3g.china
